

## CASE STUDY

<b>PROJECT:</b>	The Slate
<b>LOCATION:</b>	Warwick
<b>PRODUCTS:</b>	Aluminium balustrade and Neatdek decking
<b>VALUE:</b>	£4.27m

**Neaco's powder coated balustrade and aluminium grille systems have been extensively specified at The Slate, the University of Warwick's impressive conference centre occupying a waterside setting in the heart of the campus.**

Designed by Associated Architects and built by Speller Metcalfe, the single storey facility comprises 650 sqm of flexible event space, including a large multi-purpose conference room, kitchen, office and plant room. Providing a capacity of up to 400 delegates, the building maximises views of the adjoining lake with a predominance of glazing and no pillars or fixtures to obscure the outlook. Neaco's aluminium balustrade lines the full length of the front terrace overlooking the lake and has been designed to accommodate the view with clear glass infill panels. The terrace also features Neaco's Neatdek aluminium grille decking.

The Slate has been designed to provide tailor-made experiences and offers exclusive occupancy with completely open and fluid space. The project has been designed to BREEAM Excellent with various sustainable features including PV panels and use of the existing hot water and power systems as well as extensive sheet piling and SUDS drainage due to the presence of the lake.
