GIRA
We are the ones with the switches. But we’re so much more.
Gira / Brand world

On.

We are Gira.
We are the ones with the switches.
But we’re so much more.

Future-oriented.
Certified.
Responsible.

We’re the guardians, innovators,
Smart Home pioneers, developers,
systems thinkers, KNX partners,
shapers of the future, patent masters,
award winners and designers.

But above all, we’re the ones
who listen.
To you.

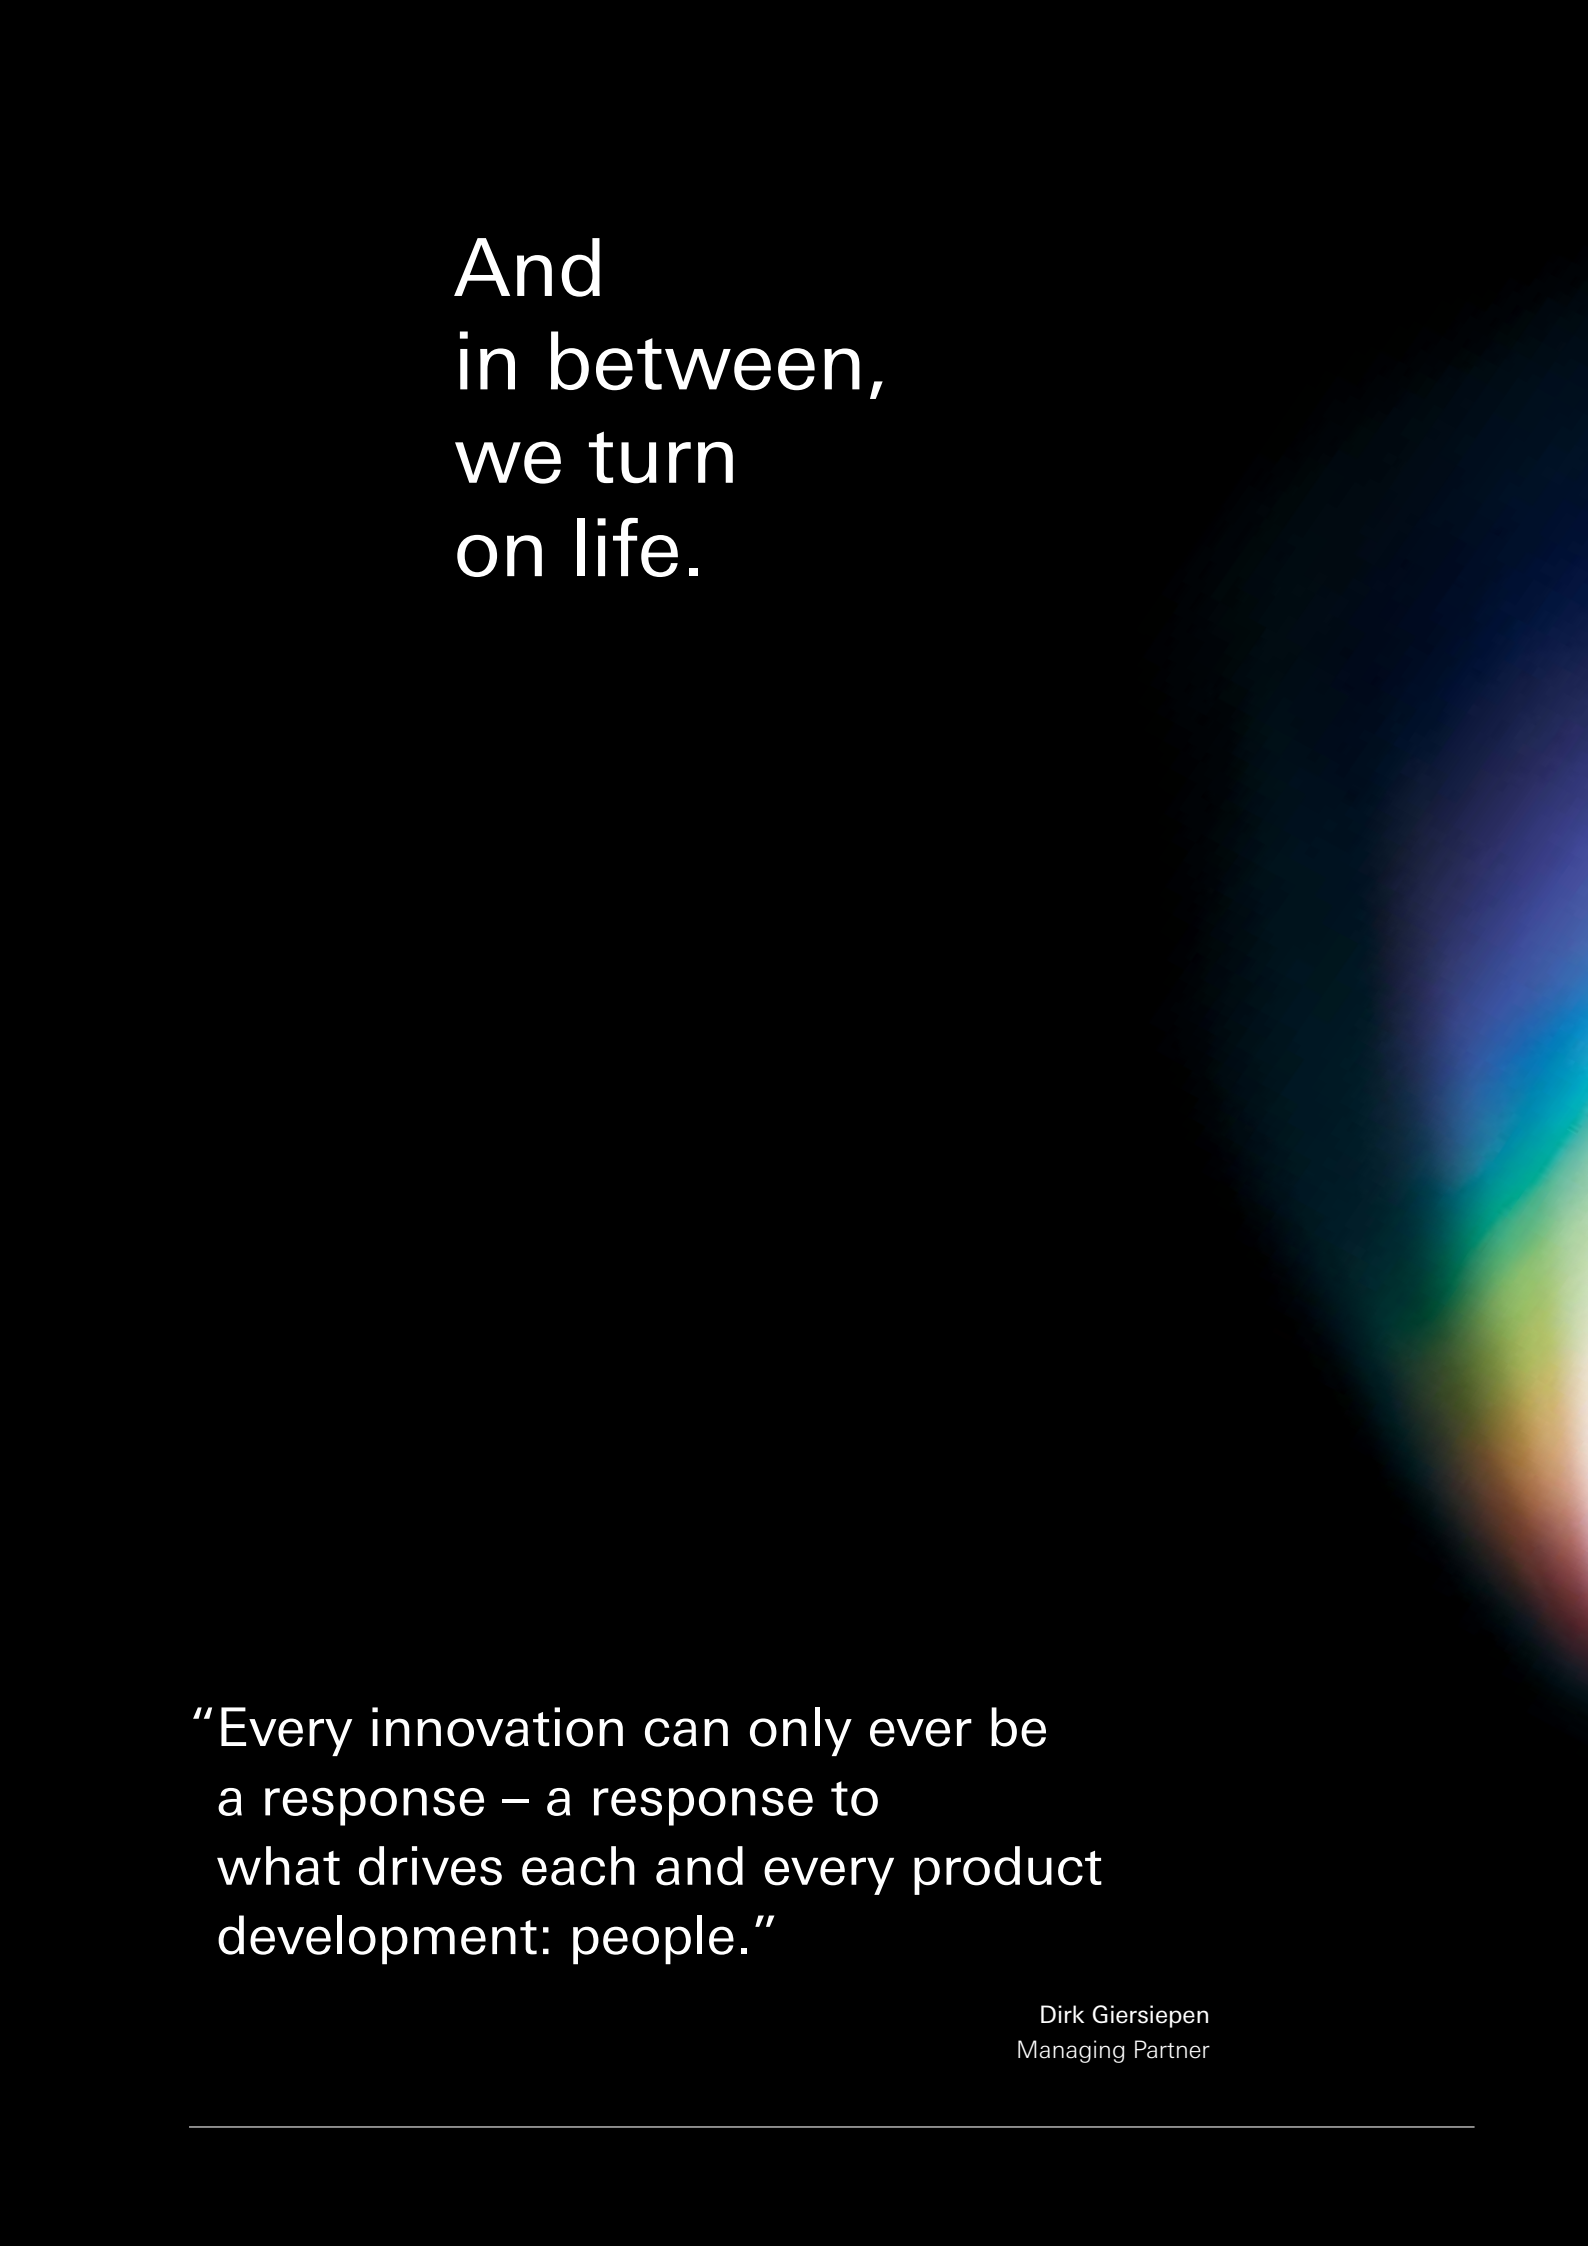
Subtle, but smart.
With distinct focus on quality,
materials and functions.
And the driving force of innovation.

In our hearts, we are engineers
on a mission to inspire.
With new technologies,
smart applications, and
impressive attention to detail.

We will always work our hardest
to find the best solution for you.
With service, design and performance
made in Germany.

Because that is what we stand for.
And have been standing for since 1905.

And
in between,
we turn
on life.



"Every innovation can only ever be
a response – a response to
what drives each and every product
development: people."

Where intelligence and emotion complement each other.

Humans are mobile, networked and self-determined. Their demands are increasing – especially within their own four walls. Gira is not only keeping pace with this development, it is always one step ahead with its Smart Home products and focus on persons and their needs.

Today is the new tomorrow.

What is decided today must still be valid tomorrow, or be able to adapt to new conditions. It must be smart. Be modular. After all, it is not every day you select the nervous system for your house.

Innovation is not about what we can do, but rather about doing everything we can do in order that you can do something.

We must not concentrate on the technology in the room, but instead on the life that takes place inside it. This is why Gira has developed a flexible product that can continuously adapt to the user's needs, constantly developed and also be expanded later. The award-winning design can be adapted to changing conditions and interior design concepts without changing the central elements at the core.

Smart life.
Based on a systematic approach.

With us, the choice is yours. Regardless of whether it is a renovation project or a new building: Gira offers a flexible modular system for all construction or economic requirements, which can be individually adapted to your options or future plans.

Komfort (Bluetooth)

The perfect introduction to your Smart Home: control light, shade and heating from the sofa via Bluetooth or simulate absence by setting lighting and blind operating times.

System 3000

Controls
- Lighting
- Blind / roller shutter / awning
- Heating

Operation using
- Switching and button top units
- Motion detector
- App for smartphone and tablet

Komfort (wireless)

For quick installation and retrofitting without a minimum of installation work. Control light, blinds and heating conveniently, even when you're on the move, using the Gira eNet App. And always have a perfect overview of all the functions.

eNet SMART HOME

Controls
- Lighting
- Measuring electrical energy
- Blind / roller shutter / awning
- Scenes
- Heating

Operation using
- Multi-touch display G1
- App for smartphone and tablet
- Voice command
- Wireless wall transmitter
- Wireless hand-held transmitter
- Wireless switching and dimming top unit
- Wireless button

Premium (KNX)

Network your house and program personal scenes for the lights, blinds, temperature or music.

X1

Controls
— Lighting
— Window and door monitoring
— Heating / ventilation / air conditioning
— Measurement and control
— Blinds / roller shutters / awning
— Audio
— Value input
— Scenes
— Browser integration
— Camera
— Weather forecast

Operation using
— Multi-touch display Gira G1
— Pushbutton sensor
— App for smartphone and tablet

High End (KNX)

The HomeServer manages and logs information in your house comprehensively: climate, multimedia devices, security and if you like, even your sprinkler system.

Gira HomeServer

Controls

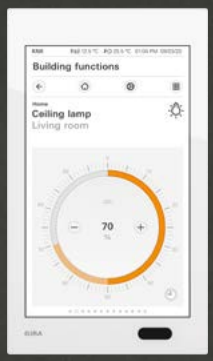
Heating



Intelligence adapts to the environment? Ours controls it.

Regardless of whether it's an eNet or KNX system: With the intelligent G1 operating element, lights, blinds, heating and much more can be controlled intuitively. Using a timer,you can pre-programselected functions and also use a presence simulation when you're away to protect against burglary.

You have all the options. With just a single touch.

With the Gira KNX pushbutton sensor 4, you can control the heating, air conditioning, blinds and lights. And you can not only control individual elements, you can also call up entire room scenarios. A single touch is enough to check your home onthe enlarged operating surface with a pleasant feel.

An integrated humidity sensor and the connection for external temperature sensors make the elegant sensor a multifunctional genius.

Mood preprogrammed with an app.

No matter which system you choose: All settings are under control with Gira App: blind and light control, door communication and security systems.

Already created timeprograms are easy to operate and set. Conveniently on the sofa or on the go.

Light control

When light takes shape.

Light has a strong influence on our well-being. To create a high level of living comfort, we should be able to adapt the ambience to our individual wishes. Bring more of the day into the night. Or night into day.

Light is limitless. Now controlling it is too.

With our Gira light control, rooms can be accentuated atmospherically or precisely illuminated. Gira offers a multitude of operating options, depending on the system: You have the choice of whether you want to switch or dim manually or whether you prefer to control the light via app or touch.

Dim the lights. Not the comfort.

The Gira dimmer ensures a pleasant ambience with its infinitely variable setting, while also saving energy.

Feel safe all around.

With its new technology, the Gira Cube motion detector ensures comprehensive security in outdoor areas. Sensors for the detection of thermal movement cause the outdoor lighting to be switched on automatically.

The Gira Cube motion detector can be flexibly mounted on the ceiling or on the wall. With its hidden cover, it can limit the detection range as required.

Bring more light into the dark.

Particularly sensitive, digital sensors ensure reliable and error-free motion detection. In addition to automatic lighting control, entire light scenes – as well as heating, air conditioning or blinds – can be activated as soon as a person enters, and then switched back off.

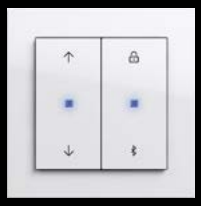
360° presence. Every step of the way.

Cover a complete area with the Gira presence and motion detector 360° Bluetooth top unit. It is simply installed under the ceiling. This presence detector leaves the light on even if there is sporadic movement.

The device can be easily and conveniently parametrised via the Bluetooth App.

Where there is shadow, there is also light.

Let the sun in. Or enjoy the cool shade. Automatically controlled or self-determined. Just one blind? Sun tamer. Mind reader. Climate friend.



Be the conductor of day and night.

Adapted to all weather conditions, blinds help to stabilisethe climate in the room and save energy. With the corresponding top unit, you can choose the type of operationyourself: manual, automatic or with an app.

For easy control of blinds, shutters and awnings, the Gira System 3000 offers you a choice of different top units: from manual control to Bluetooth control via an app to time-dependent control.

With the touch-sensitive display device of the blind timer switch, travel times can be defined, applied and thus a presence also simulated.

The integrated astro function dynamically adjusts the times to sunrise and sunset as well as to daylight saving time.

Everything for
a good climate.
And a clear
conscience.

Imagine a place where the weather doesn't matter. A room with warmth, affection and a rejuvenating effect, so pleasantly tempered and well-ventilated that you don’t even notice its existence. But you are happy to be there nonetheless.

Well tempered and enduring.

With its integrated heating and cooling program, the Gira room temperature controller not only ensures the perfect temperature, it is also the most intelligent way of controlling individual rooms based on your needs, while saving costs and resources, for example in case of absence or reduced use.

Simply take a deep breath.

Thermal insulation combined with excessive humidity can cause mould to develop in rooms. The Gira hygrostat is a reliable aid for controlling the humidity in rooms, regulating the room climate and thus contributing to the value retention of the property.

Good air makes for a good mood.

The Gira room air CO_2 sensor monitors the CO_2 concentration of your rooms and thus ensures well-being. The air quality is indicated by LEDs in traffic light colours.

If a limit value is exceeded, windows can be opened automatically or fans can be switched on, for example.

The home of security.

To ensure you can enjoy your home care-free, Gira offers a wide range of security components that let you can lean back and relax.

You can find more information on this topic on our website.

- Door intercoms: gira.com/doorcommunication
- Door communication configurator: dcsconfigurator.gira.com

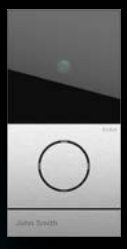
Let yourself be guided. By your socket outlet.

A good combination – the Gira SCHUKO socket outlet with LED orientation light offers two advantages: power and light.

Thanks to a small recessed light strip, a bright corridor of light is automatically created on the floor in the dark, helping children to orientate themselves safely in the dark and easing their fear of the dark. Available in different design lines.

A door steward that is also good-looking.

The System 106 not only has great design. With its video function, pictures of contact persons can be captured even during an absence. With the Gira DCS mobile App, you can also see, talk to and open doors for your visitor on your smartphone while on the go.



Proactive hospitality.

The surface-mounted video home station 7 combines a high level of operating comfort with excellent display quality and practical speakerphone function.

This way you can see who's at the door beforehand. What has long been standard in the automotive industry is now also offered by Gira for home automation: Keyless In products, with which you can grant keyless access to your home simply at the touch of a finger or with a code.

Rely on proven security. Don’t leave it to chance.

Know where to go.

The Gira LED orientation light makes it possible to find your way safely in the dark with the selective illumination of stairs, corridors and outdoor paths. Gira offers various LED products to match the Gira design lines.

For all products, LED technology guarantees a long service life and economical power consumption. The LED lights can be expanded to create versatile information signs using icons and inscriptions.

Security starts with data.

To ensure that not only your home, but also your data transmission is secure, the Gira S1 remote access module enables you to access the control system of your KNX Smart Home securely from anywhere.

Thanks to encrypted communication, blinds can be controlled, lights switched off or camera images checked remotely. And all this with the comfort of knowing that no one else can access your data

Quality can protect life.

It is therefore all the more important that no compromises are made. This is why Gira produces its Basic Q and Dual Q smoke alarm devices as well as the wireless smoke detector according to the highest standards. The Q-label stands for tested quality, durability and the reduction of false alarms. They can detect fires before they start by the density of smoke particles and can be converted for operation at the 230 V power supply at any time.

You won’t believe your ears.

Put the day behind you. Or the night. Crank it up or kick back. In either case, do it to your favourite music.

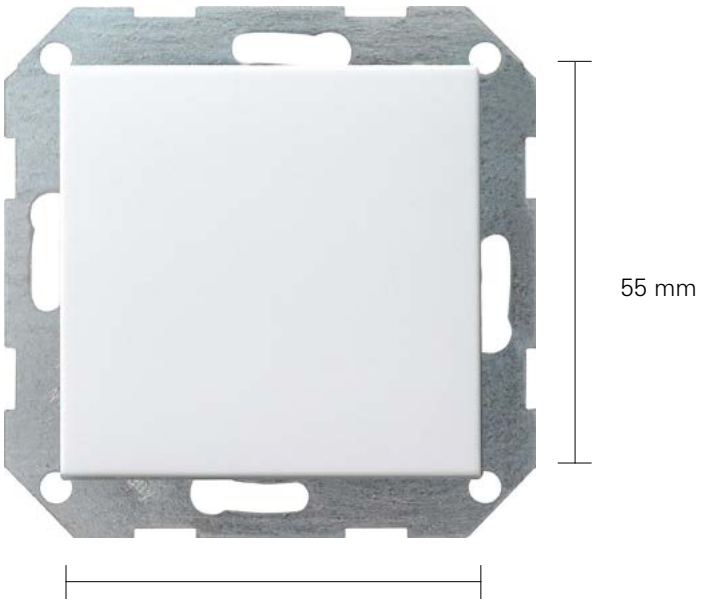
Perfect entertainment.

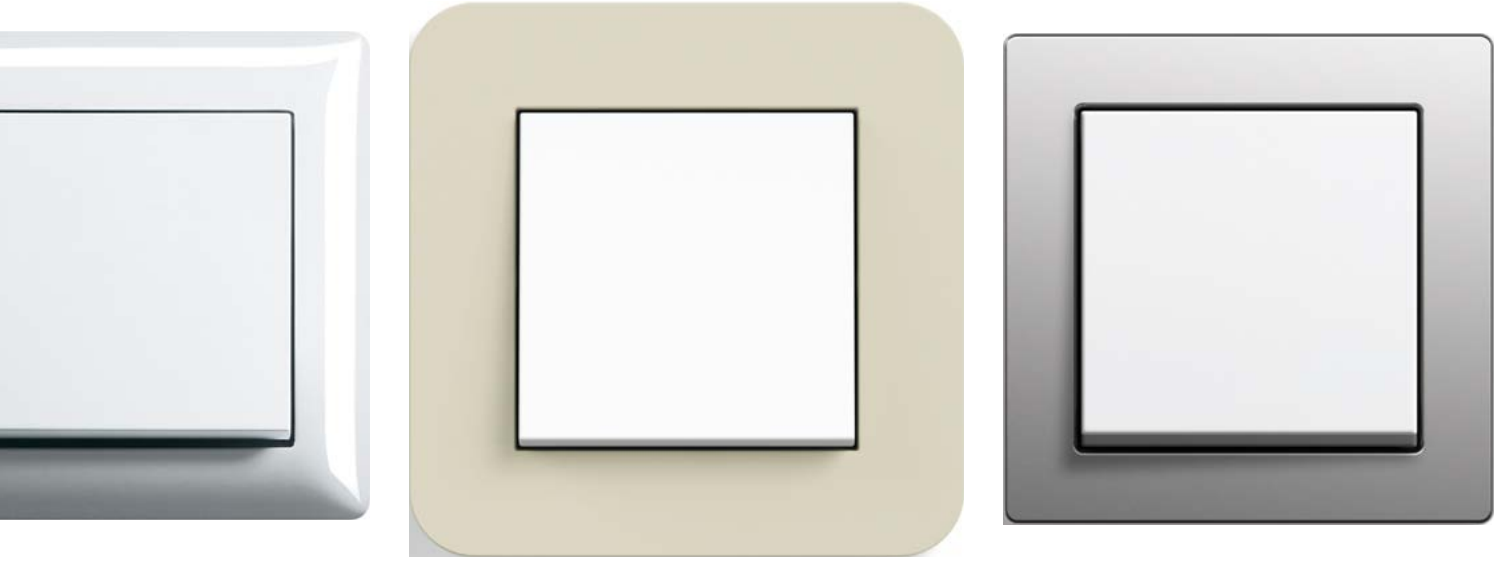
The sound experience of the Gira flush-mounted radio in the bathroom or kitchen ensures you are always well informed and entertained.

The Gira G1 can connect to your multimedia systems and operate them from anywhere with a touch. Or by voice control via Alexa.

With the tap of a finger, the Sonos sound system in your living room is controlled by the Gira G1 or Gira X1 App. Now that's music to your ears.

Unlimited flexibility.





55 × 55 mm. Just a square? Or a whole world? The Gira System 55 with its standardised, square basic dimensions functions like a modular system and offers unlimited flexibility with seven design lines and more than 300 functions. Even the subsequent exchange of frames and colour variations is possible without any problems. A real wish generator.

Switch design & function

Combine design and function.

Since it was launched, Gira's System 55 has been continuously refined and expanded with new functions that make your home ready for the future.

You can choose from over 300 functional inserts for lights, blinds, heating and room climate control, for socket outlets, the Gira home station and a large assortment of data connection technology.

Thanks to the modular system, you get a standardised design or, if desired, individual accents in the room. Simply put together your design online yourself at: designconfigurator.gira.com

Design configurator for iOS

Design configurator for Android

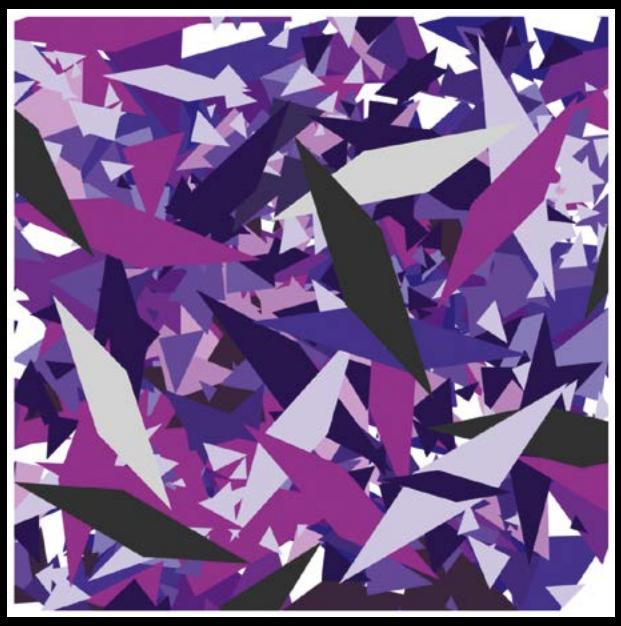
In other countries the product range may differ from the range shown here, or other specifications may apply.

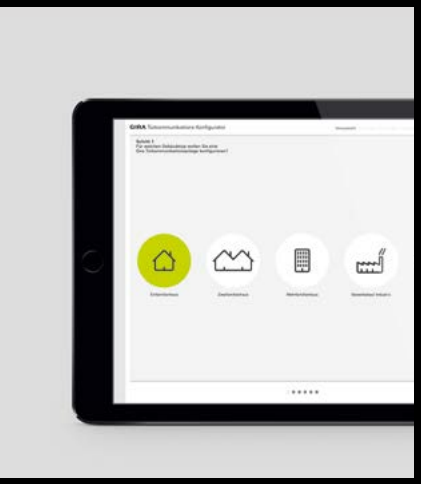
The focus of all of our efforts? You.

Innovator. System finder. Future shaper. Gira develops products that lead the way in technology and design. We make rooms think; we give technology a heartbeat; we take responsibility for the future and shape it. Our benchmark for this? The individual requirements of our customers. That means you.

Design configurator

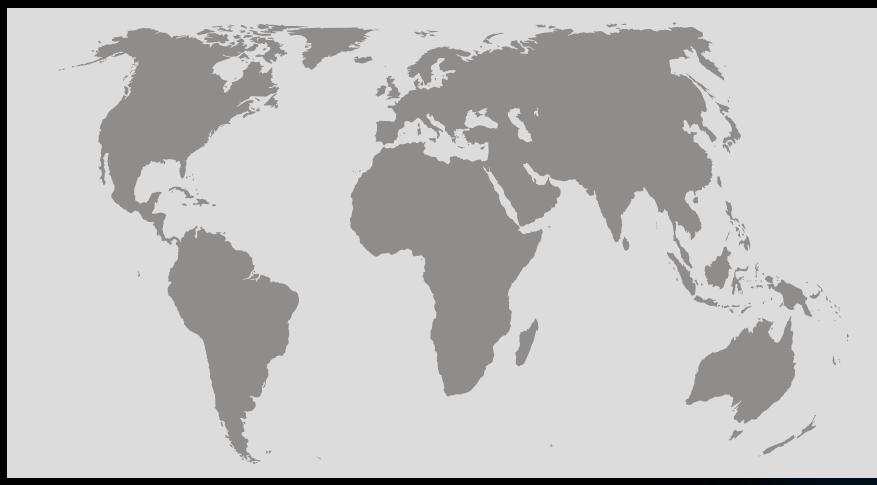
With the Gira Design Configurator you can combine all Gira design lines with functions of your choice. The personally configured product can then be viewed live in your own four walls and saved. Simply test at: designconfigurator.gira.com





DCS Configurator

With the user-friendly Gira door communication configurator, finding the right system components for your future door intercom system is as easy as ABC. Simply go to: dcsconfigurator.gira.com



G-Pulse

The interactive design magazine from Gira provides ideas and inspiration for current topics in home design, smart technology, architecture, light and lifestyle: g-pulse.com

Being innovative means thinking beyond your own four walls.

Gira is a family-run company, and has been for four generations. It's what keeps us at the forefront of residential technology, revolutionising the market with innovative products and system solutions.

"Made by Diversity"

Gira has been producing products at its location in Radevormwald for more than 100 years. The company is fully committed to the "Made in Germany" quality standard. This is what 1,250 employees from 27 nations work for – each and every one of them with different talents, individual expertise, wide-ranging experiences and different life stories. This diversity – supported by common values – is the basis for our creativity, innovative strength and viability for the future.

Innovative technology meets excellent design

Gira has always aspired to combine maximum functionality and reliability in a unique design. With a host of international design awards to their name, our stylish product lines set new standards in development and innovation.
